ABOUT ME

Software Engineering graduate from Eastern International University. Intrigued by Full-Stack Development, Backend Engineering, and AI applications. Experienced with Java, Spring Boot, React, Next.js, Node.js, Express.js, FastAPI, MongoDB, and RESTful APIs.

TECHNICAL SKILLS

Languages:

TypeScript, JavaScript, Python, Java, C#, C++, Rust, R, MATLAB, SQL

Frameworks & Libraries:

React, Next.js, Node.js, NestJS, Express, Spring Boot, FastAPI, .NET, .NET Core, TensorFlow, NumPy, OpenCV, Tailwind CSS

Tools:

Git, GitHub, VS Code, Docker, Jupyter, MongoDB, MySQL, Anaconda, Visual Studio, IntelliJ IDEA, Unreal Engine 5, Blender

Concepts:

OOP, MVC, Design Patterns, DSA, Agile, SDLC

CERTIFICATIONS

English ●●●●○ IELTS 7.5

WORK EXPERIENCE

AI/Vision & Full-Stack Developer (Full-Time)

Phạm Trần Gia Hưng

Full-Stack Developer

EDUCATION

Eastern International University

Major: Software Engineering

Graduated in 2 years 9 months (Sep 2023 – Jun 2026)

EXPERIENCE

NONPAREY / Asia Genomics — DNA-Powered Wellness Platform

AI/Vision & Full-Stack Developer (Full-Time)

Tech Stack: Next.js, React, TypeScript, FastAPI, Python, AWS Lambda, Aurora PostgreSQL, DynamoDB, Claude on Bedrock

- Worked full-time across both the frontend and backend of a DNA-powered wellness platform in two repositories: a Next.js/React/TypeScript + FastAPI web app and a TypeScript/AWS Lambda AI services monorepo.
- Built and shipped frontend pages (Framework, Formula) with a shared design system (navigation, footer, member dock) as part of a UI/UX overhaul.
- Developed backend features on FastAPI/Python, including a profile-edit and courier-booking wizard, database-backed consent capture, and resilient Shopify API integration with rate-limit retry logic.
- Contributed to the AI side of the platform: audit logging and JWT-based account setup on AWS Lambda, and concierge/analysis features backed by Claude on Bedrock.

Astute Industries — WRI Warehouse Visualization App

Software Developer (Part-Time)

Tech Stack: TypeScript, React, Three.js, SVG, Node.js

- Delivered warehouse floor-plan visualization tooling for the WRI app, including a contract-compliant warehouse-layout SVG (6 zones, locked viewBox, data-zone-id attributes) consumed by a React component with runtime color overlay support.
- Built a Three.js 3D bridge demo as part of a visualization improvement proposal for the warehouse floor plan.
- Developed a TypeScript warehouse zone heatmap module using shared wri-contracts types, with boundary-safe score clamping, piecewise color interpolation, and bijection integrity checks, validated against 45 unit tests.
- Collaborated with the React and runtime-effects engineers on the team to integrate visualization components into the wider WRI application.

GoFleet — AssetPlacementEditor (UE5 Robotics & Warehouse Simulation)

Software Engineer Intern (Software & Simulation Developer) · Singapore

Tech Stack: Unreal Engine 5, C++, Slate UI, Blender

- Worked as a software and simulation developer building AssetPlacementEditor, a UE5 Slate editor plugin for simulating robots and warehouse layouts.
- Implemented an asset browser, a 3D viewport with gizmos, a joint editor for an IRB 120 robot arm, and WASD movement controls for a MiR250 warehouse robot simulation.
- Prepared and separated FBX meshes in Blender for use in robot and warehouse simulation assets.
- Fixed C++ build errors (RobotDemoWidget.cpp) and resolved MSBuild path-length issues affecting the plugin build.
- Managed large Unreal Engine asset files in GitHub using git-filter-repo to keep the repository within size limits.

eco-faker – E-Commerce Data Generator (npm)

Author & Maintainer (Open-Source Package)

Tech Stack: TypeScript, Node.js, Vitest, Express, Docker, GitHub Actions

NONPAREY / Asia Genomics · Jun 2026 – Present

Frontend (Next.js/React/TypeScript) + backend (FastAPI) + AI features (AWS Lambda, Claude on Bedrock)

Software Developer (Part-Time)

Astute Industries · Jan 2026 – Aug 2026

Warehouse visualization tooling (React, Three.js, SVG) for the WRI app

Software Engineer Intern

GoFleet · Oct 2025 – Jan 2026

Software & simulation developer — UE5 robot and warehouse simulation tooling

Private English Tutor

January 2025 – July 2026

- Personalized tutoring for students, focusing on language skills.
- Helped students prepare for the IELTS exam.

INTERESTS

LeetCode; Strategy & PvE games (Hearts of Iron IV, Factorio, Helldivers 2).

- Published an npm package that generates stateful, relationally-consistent e-commerce datasets from a cart state machine.
- Built the my-eco-gen CLI with JSON / SQL / CSV output, deterministic snapshot-and-replay, and NDJSON streaming for 1k+ records.
- Shipped a mock REST API with an OpenAPI spec, chaos mode, API-key auth, a WebSocket live feed, and webhook event replay.
- Added schema introspection that auto-maps output onto existing Prisma, Drizzle, or SQLAlchemy schemas.
- Covered the generator with 64 Vitest tests across a three-job CI pipeline (unit, CLI e2e, mock-API e2e).

GitHub: github.com/Hung1510/Eco-Faker

Super Earth Armory Forge – Helldivers 2 Armor Passive Editor

Author & Maintainer (Personal Project)

Tech Stack: Lua, Python, JavaScript, GitHub Actions

- Built a live armor-passive editor mod for Helldivers 2: an in-game F7 terminal to tick, retype, and stack any of the game's 31 armor passives at once, with saved loadouts hot-swapped in game via F9.
- Started as a fork of Modular Armor Passives v3 (mostlycloudy); rebuilt the editing layer into a named-effect terminal, a loadout/config system, and a browser-based web builder, while crediting and keeping the original's memory-patching engine.
- Built a Python CLI as the single source of truth for the passive catalog, release .zip, and web-builder data, plus a patch-day diff tool that flags new or changed passives after a game update.
- Shipped a web builder (JS + JSZip) for planning a build outside the game, kept byte-identical to the Python build logic via an automated parity test.
- Published on AyakaMods, NexusMods, and GitHub, passing 2,500+ views and 500+ downloads, with CI-driven testing (a fake-game Lua test harness, panel-layout checks) and tag-triggered automated releases.

Smart Learning Advisor

Web Developer (Group Project)

Tech Stack: Node.js, Express.js, MongoDB, Firebase, Bootstrap, EJS, D3.js, Vercel

- Developed an academic advising platform with GPA tracking and personalized course recommendations.
- Built RESTful APIs using Express.js and MongoDB.
- Designed responsive interfaces with Bootstrap and EJS.
- Integrated AI-powered recommendation and chatbot features.

Project Link: [smart-learning](#) (ID: 233188e4eda1, Pass: 9006)

Quiz & Interview Practice Platform

Web Developer (Group Project)

Tech Stack: ReactJS, Spring Boot, MongoDB, Vercel

- Developed an IT interview preparation platform using Spring Boot.
- Built RESTful APIs and administrative features.
- Designed responsive dashboards and interview interfaces.
- Integrated AI chatbot and quiz generation functionalities.

Project Link: [IT-Quiz](#) (Name: datly, Pass: 123456)

CodeNavigator – Local Code Intelligence

Systems Developer (Personal Project)

Tech Stack: Python, tree-sitter, ONNX (fastembed), BM25, Tauri 2

- Built an offline RAG tool that answers plain-language questions about any codebase with file:line citations.

- Fused ONNX embeddings and a hand-rolled BM25 index via Reciprocal Rank Fusion, refined by a cross-encoder reranker.
- Added tree-sitter structure-aware chunking and a call-graph engine (defs / callers / callees) across 9 languages.
- Built an eval harness (recall@k, MRR) with a CI quality gate, plus a Tauri 2 desktop shell over one shared engine.

GitHub: github.com/Hung1510/Code-Navigator

Tethys – Echo Build Optimizer & Scanner

Systems Developer (Personal Project)

Tech Stack: Rust, Cargo Workspace, egui, Tesseract OCR, GitHub Actions

- Built a native desktop tool that reads in-game echoes via screen capture and OCR, then computes optimal builds.
- Designed a genetic-algorithm optimizer validated against an exhaustive brute-force solver in the test suite.
- Implemented resolution-independent capture-region detection (16:9 fit) with a live-calibration overlay.
- Structured a tested Cargo workspace (core / scanner / app) with a CLI and a CI release pipeline.

GitHub: github.com/Hung1510/Tethys

ADDITIONAL PROJECTS

Personal Portfolio: ReactJS & Tailwind CSS — giahung-portfolio.vercel.app

Data Analysis & Visualization: Python (pandas, numpy, matplotlib, seaborn), SQL, Power BI — Sales Analysis, Movie Correlation, Layoffs EDA, and Plant Sales Dashboard projects.
